Exensor Announces the Acquisition of CRL Sweden

Exensor today announces that it has acquired 51% of CRL – Communication Research Labs Sweden AB – www.crl.se, a privately owned company based in Kalmar, Sweden, which provides wireless state of the art mesh communication software products and services to the global market. CRL provides wireless equipment manufacturers and system integrators with world leading Mesh technology within applications of wireless broadband networks, telemetry, telematics, heavy industry environments and military special applications amongst others.

The acquisition of CRL is a further advance in Exensor providing comprehensive state-of-the-art ground sensors systems to the defense and homeland security markets. CRL's products, R&D activities and wireless communications capabilities enable Exensor to be more flexible and robust by extending communication range, reliability and flexibility to meet customer needs.

Exensor CEO Christian Gravengaard states, "CRL is another step forward in becoming the global leader in providing world class protection and security to the military and homeland security markets. Our acquisition of CRL and its mesh technology software in addition to our recent expansion through acquiring Arkonia and its camera systems, passive infrared (PIR) systems, and production facilities further compliment Exensor's product offering by enabling us to provide our customers with a complete solution."

The Exensor group is a world leader in the development, design, integration and supply of state-of-the-art ground sensor systems and user interface / C2 systems for the surveillance of personnel as well as vehicle movements for military and homeland security applications. The group is headquartered in Lund, Sweden with offices in France and the United Kingdom employing approx. 50 people.
